Experiment No. 7

Apply Dimensionality Reduction on Adult Census Income

Dataset and analyze the performance of the model

Date of Performance: 11-09-2023

Date of Submission: 09-10-2023

Department of Computer Engineering

Aim: Apply Dimensionality Reduction on Adult Census Income Dataset and analyze the

performance of the model.

Objective: Able to perform various feature engineering tasks, perform dimetionality

reduction on the given dataset and maximize the accuracy, Precision, Recall, F1 score.

Theory:

In machine learning classification problems, there are often too many factors on the basis of

which the final classification is done. These factors are basically variables called features.

The higher the number of features, the harder it gets to visualize the training set and then

work on it. Sometimes, most of these features are correlated, and hence redundant. This is

where dimensionality reduction algorithms come into play. Dimensionality reduction is the

process of reducing the number of random variables under consideration, by obtaining a set

of principal variables. It can be divided into feature selection and feature extraction.

Dataset:

Predict whether income exceeds \$50K/yr based on census data. Also known as "Adult"

dataset.

Attribute Information:

Listing of attributes:

>50K, <=50K.

age: continuous.

workclass: Private, Self-emp-not-inc, Self-emp-inc, Federal-gov, Local-gov, State-gov,

Without-pay, Never-worked.

fnlwgt: continuous.

Department of Computer Engineering

education: Bachelors, Some-college, 11th, HS-grad, Prof-school, Assoc-acdm, Assoc-voc, 9th, 7th-8th, 12th, Masters, 1st-4th, 10th, Doctorate, 5th-6th, Preschool.

education-num: continuous.

marital-status: Married-civ-spouse, Divorced, Never-married, Separated, Widowed, Married-spouse-absent, Married-AF-spouse.

occupation: Tech-support, Craft-repair, Other-service, Sales, Exec-managerial, Prof-specialty, Handlers-cleaners, Machine-op-inspct, Adm-clerical, Farming-fishing, Transport-moving, Priv-house-serv, Protective-serv, Armed-Forces.

relationship: Wife, Own-child, Husband, Not-in-family, Other-relative, Unmarried.

race: White, Asian-Pac-Islander, Amer-Indian-Eskimo, Other, Black.

sex: Female, Male.

capital-gain: continuous.

capital-loss: continuous.

hours-per-week: continuous.

native-country: United-States, Cambodia, England, Puerto-Rico, Canada, Germany, Outlying-US(Guam-USVI-etc), India, Japan, Greece, South, China, Cuba, Iran, Honduras, Philippines, Italy, Poland, Jamaica, Vietnam, Mexico, Portugal, Ireland, France, Dominican-Republic, Laos, Ecuador, Taiwan, Haiti, Columbia, Hungary, Guatemala, Nicaragua, Scotland, Thailand, Yugoslavia, El-Salvador, Trinadad & Tobago, Peru, Hong, Holand-Netherlands.

Department of Computer Engineering

Conclusion:

- 1. The accuracy of the logistic regression model after dimensionality reduction is approximately 0.8227.
- 2. The precision for the >50K class is 0.72, recall is 0.43, and F1-score is 0.54.
- 3. The precision for the <=50K class is 0.84, recall is 0.95, and F1-score is 0.89.
- 4. Dimensionality reduction has a positive impact by reducing the complexity of the model (fewer features to consider), making it computationally efficient, while still maintaining a reasonable level of predictive performance.
